SUMMARY

Backend-focused Software Development Engineer with hands-on experience building scalable, high-throughput payment and reconciliation systems using **Java**, **Spring Boot**, and **microservices**. Skilled in REST API design, SQL, and system reliability, with a proven record of improving data integrity and reducing production downtime across high-volume fintech platforms.

EXPERIENCE

Product Solution Engineer

PhonePe

May 2025 – Present

Bengaluru, Karnataka

- **Financial Reconciliation Automation:** Architected a Python-based classification engine to automate financial reconciliation, strengthening data integrity and streamlining high-volume transaction workflows.
- **Near Real-Time Reconciliation Reporting:** Built an automated reporting pipeline that queries mismatched, reconciled, and missing transactions across configurable date ranges and refreshes counts on each next-day report run for near real-time visibility.
- **Production Workflow Optimization:** Optimized payment reconciliation systems with automated health checks and proactive monitoring, reducing production downtime by **~24%**.
- **Operational Checkpointing:** Engineered a transaction checkpointing framework to detect real-time discrepancies between external partner sources and internal ledgers, sustaining **~100%** data consistency.

Software Development Engineer - 1

BookMyShow

May 2022 – June 2024

Mumbai, Maharashtra

- **Payment Gateway Integration:** Optimized high-throughput payment and refund APIs using **Spring Boot** and **Java**, implementing configurable retry logic and idempotent timeouts that reduced transaction failures by **~10%**.
- **Refund Automation API:** Architected a scalable multi-database (**MySQL**, **MSSQL**, **MongoDB**) refund API, automating policy compliance and accelerating refund processing cycles by **~40%**.
- **System Reliability:** Re-engineered production payment workflows to eliminate bottlenecks, decreasing system downtime by **~20%** through faster incident resolution, automated monitoring, and cross-functional collaboration.

Programmer Analyst Trainee

Cognizant

Dec 2021 – March 2022

Bengaluru, Karnataka

- **Enterprise Software Enhancement:** Refactored core modules of a **Java** and **MySQL** client project, boosting system performance and enabling seamless enterprise-level deployment.

Full-Stack Development Intern

HighRadius

Jan 2021 – March 2021

Bhubaneswar, Odisha

- **B2B Bill Management:** Built a full-stack application using **Java**, **Python**, and **React**, integrating **ML** classification models to automate invoice processing and reduce manual management time.

TECHNICAL SKILLS

Languages: Java, C++, Python, JavaScript, SQL

Frameworks: Spring Boot, Hibernate, REST APIs, React

Databases: MySQL, MSSQL, MongoDB, HBase

Concepts: Data Structures & Algorithms, OOP, System Design, Microservices, Multithreading, Design Patterns

Tools & Practices: Git, Maven, Postman, IntelliJ IDEA, Linux, CI/CD, Agile/Scrum

AI Tools: Claude, GitHub Copilot, ChatGPT

Cloud Technologies: AWS Lambda

PROJECTS

PaymentsAPI | *Spring Boot*

- Developed a Payment Gateway API following clean architecture principles, supporting CRUD operations, input validation, and asynchronous processing for efficient payment management.

EDUCATION

Kalinga Institute of Industrial Technology

Bachelor of Technology in Information Technology

Bhubaneswar, Odisha

July 2018 – June 2022
